

Lavoisier, HND students, adults in continuing education with GRETA, our teams know how to adapt to the needs of various audiences.

Because the strength of the Lavoisier high school is first and foremost human. Teaching and education staff, management, administrative and technical staff, our teams are committed to our school and carrying out varied projects. General education and vocational education disciplines work together with many hours of co-intervention and work around the masterpiece, a project that has become essential in current vocational diplomas.

Aeronautics, industrial boilermaking, vehicle maintenance, logistics, truck driving, car body repairing & painting, on level 3 or 4, our training menu is rich. With the support of the Normandy region and companies through the apprenticeship tax, our workshops offer renewed equipment which allows training to meet the needs of companies as closely as possible : electric and hybrid cars, flight simulator, laser cutting machines, furnace for composite materials...

We are developing our partnerships with companies and professional sectors to facilitate the search for internships and professional opportunities. Open from Monday to Friday morning, our boarding school welcomes girls and boys who live far away, with quality supervision. Beyond their general and vocational curriculum, Lavoisier learners are offered various civic and cultural actions : sports trips, stays abroad, cultural journeys, prevention actions. The many works that adorn the high school corridors show the vitality of our artistic teachings for many years. We are proud of the successes and commitment of our students, in academic but also civic and cultural activities.

Within our process of European openness, the Lavoisier high school supports the mobility projects of its students, including to carry out periods of professional training abroad. We are looking to develop our partnerships with vocational schools across Europe. Do not hesitate to come visit us at the trade fairs and forums where we are present and during our open day on Saturday February 17, 2024.
